Our Product, Our Vision

EveningComet is a foreign exchange consultant/forecaster.

Aimed to assist people in analysing trends to make suggestions on what to invest in.

Gives users clarity and clear indication by providing realistic forecasts of potential return.

Feature 1: Consultant

- Takes a user budget/investment amount
- Uses the latest foreign exchange data
- Analyses the trends of the data which then compiles an investment bundle
- Provides forecast of potential future return

Feature 2: Charts Display

- Displays two user-chosen charts
- Allows users to see and analyse the changes of currency listings
- EveningComet also provides a short summary of the change of the currency.

Feature 3: Listings

- Allows users to display all listings from two chosen dates
- Can be filtered/sorted
- Up to 5 listings can be added to a watchlist to be displayed at the home page

Start date: 14/10/2021		End date: 15/10/2021		GENERATE TABLE
Currency	Start Rate	End rate	Change	Add to watchlist
AED	3.671003	3.671401	-0.000398	AED

BHD	0.377105	0.376917	0.000188	BHD

Feature 4: Currency Converter

- Up-to-date currency converter
- Provides users a tool to see accurate conversion of various currencies
- Assists users in identifying how much a currency is worth

User Personalisation

- Dark Mode - a change of scenery, for the better!
- As mentioned previously, there is a watchlist at the home page where 5 currencies can be chosen to be tracked

Overview of Past Sprints

- Project Plan
- Risk Register
- Analysis of alternatives
- Product model and architecture
- Focus and priority of user stories

Overview of Final Sprint

- Completion of the proposed model
- Final Sprint Goal: 100% completion of high priority user stories. Further expansion of model (forecast of future return) & additional UI implementation

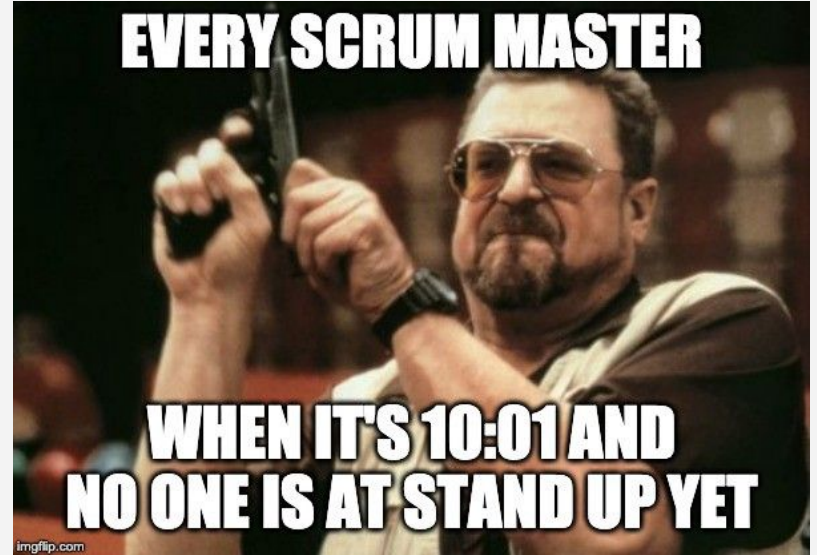

Development Process and DOD

- The idea came from a small talk a few months ago.
- Earning money from foreign exchange seemed very interesting and useful for passive income generation, with low risk.
- DOD: Successful completion of tasks on sprint backlog.

**A user interface is like a joke.
If you have to explain it,
it's not that good.**

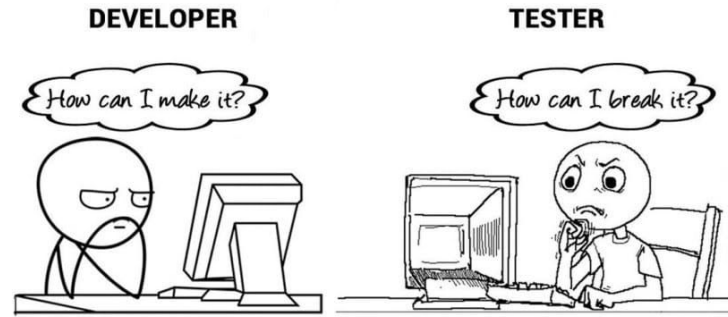

Time Logs and Management

- The team of 4 was split into two pairs which worked to deliver separate user stories
- The position of Scrum Master was transitioned between the 4 members weekly
- Trello was utilised to manage product backlog and sprint planning

GIT usage, Team Velocity & Testing/QA

- Continuous and regular commits to GIT
- Quality assurance used to prevent mistakes and defects in the app
- User-based testing

Thank you for listening!
